# DIVOLTAN

## Joining Forces

CCBs & ARBs in a Single Pill Combination

- ➔ CCB/ARB Complementary Mode of Action
- ➔ Better Blood Pressure Reduction
- ➔ Marked Reductions of Blood Pressure in all Grades of Hypertension

Amlodipine + Valsartan

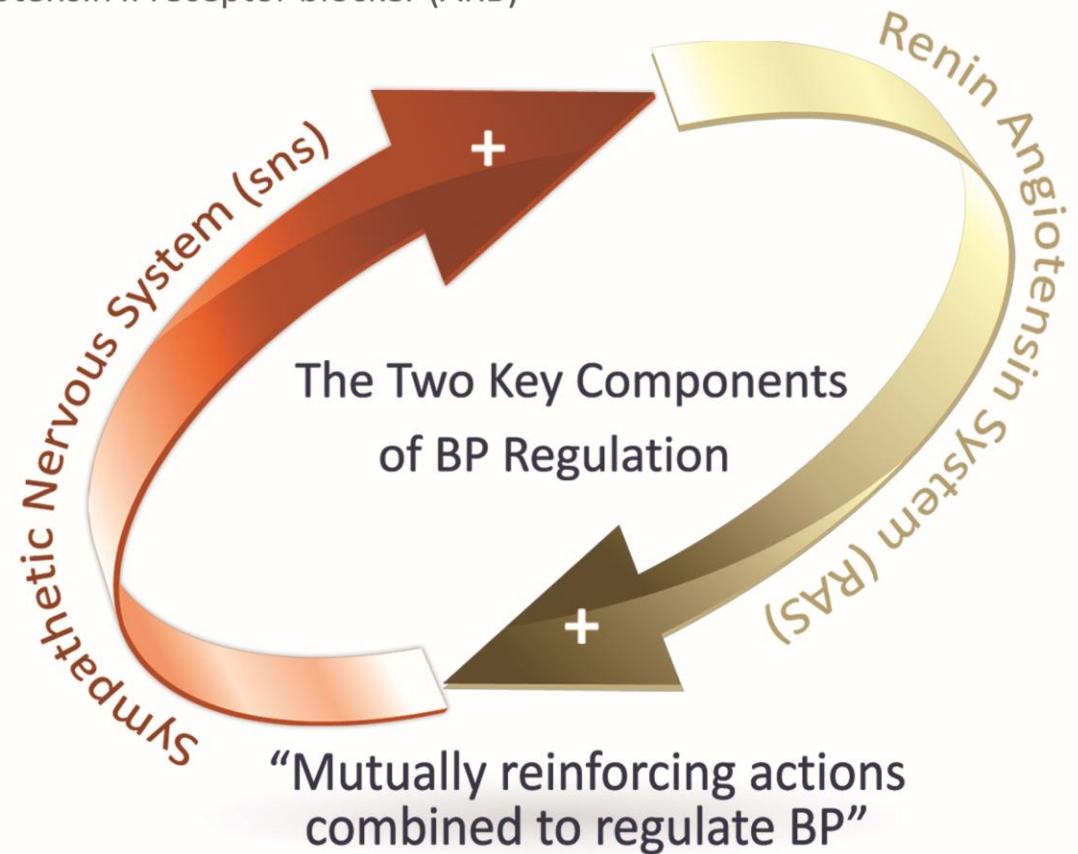

For a Healthier Tomorrow

## DIVOLTAN: CCB/ARB complementary mode of action

DIVOLTAN: The single pill that contains:

- AMLODIPINE the # 1 prescribed calcium-channel blocker (CCB)
- VALSARTAN the # 1 prescribed angiotensin II receptor blocker (ARB)

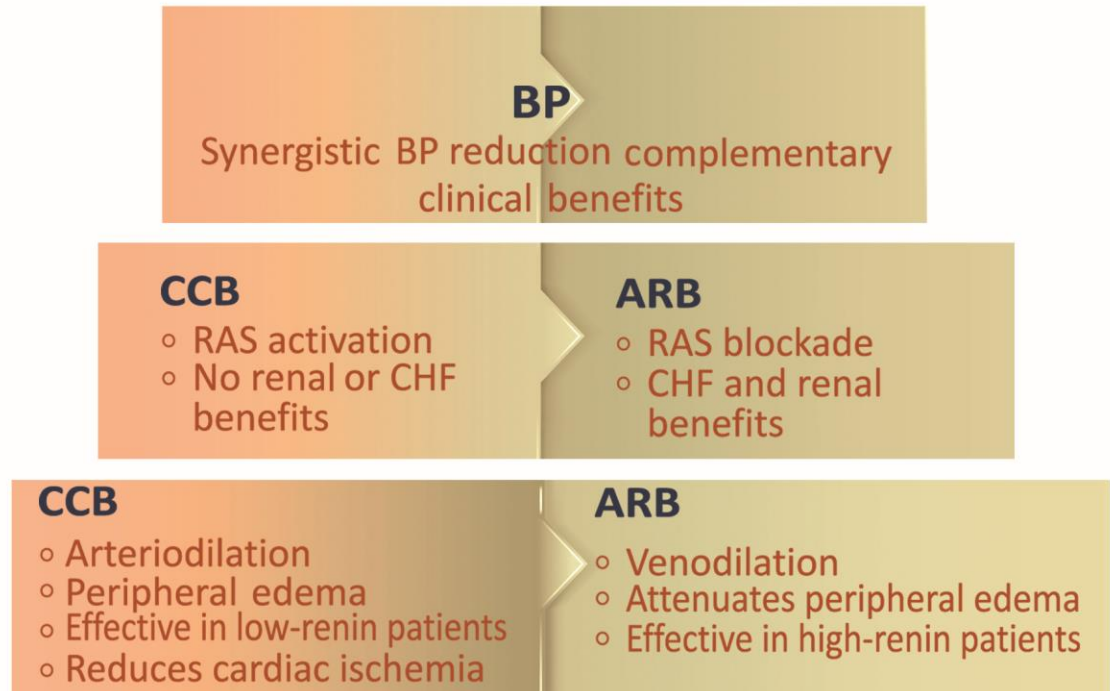

## DIVOLTAN: CCB/ARB complementary mode of action

DIVOLTAN: The single pill that contains:

- AMLODIPINE the # 1 prescribed calcium-channel blocker (CCB)
- VALSARTAN the # 1 prescribed angiotensin II receptor blocker (ARB)

### CCB+ARB: The Synergies of Counter-Regulation

## 8 DIVOLTAN: CCB/ARB complementary mode of action

Peripheral Edema Associated with CCBs

Complementary Effects of a CCB/ARB  
Reduction of CCB-associated Edema

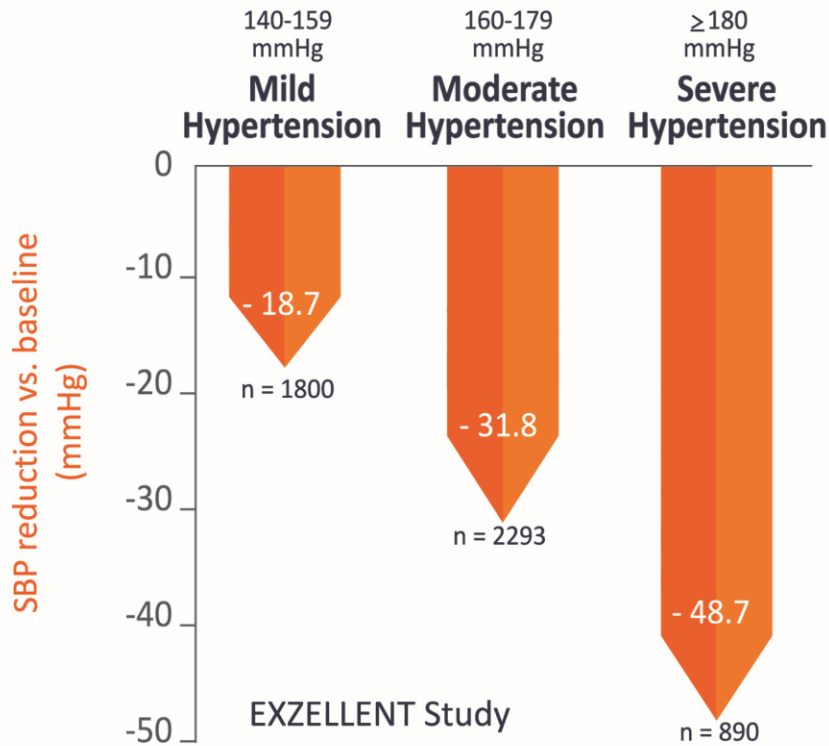

## The Power of a 2 in 1 Tablet

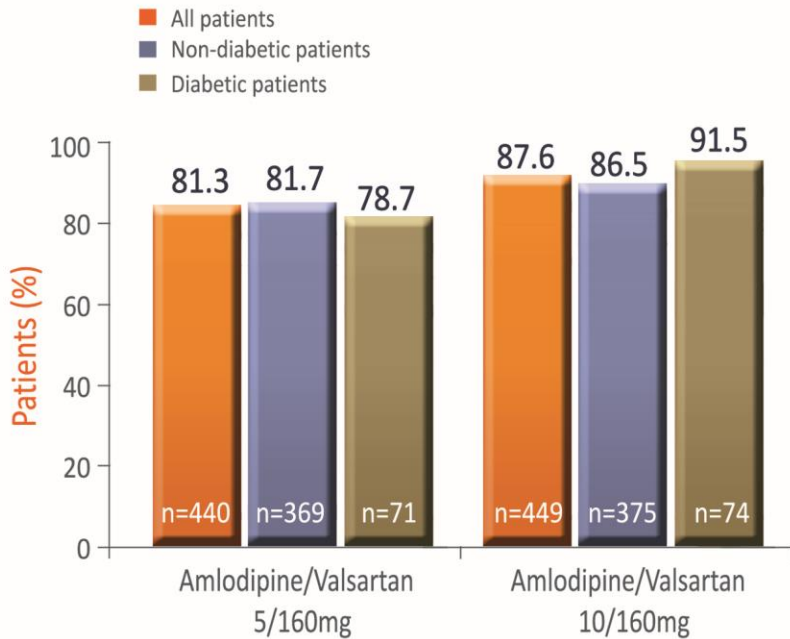

### DIVOLTAN: Marked Reductions of Blood Pressure in All Grades of Hypertension

Average blood pressure reduction in all patients

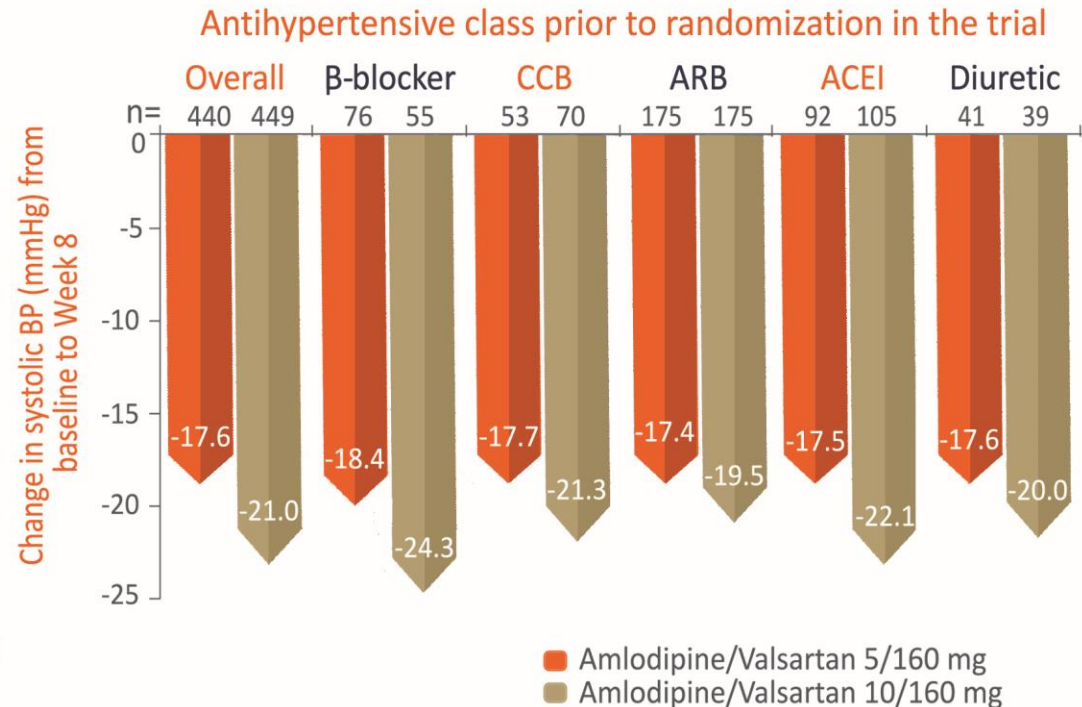

**8 DIVOLTAN:**  
Up to 9 out of 10 patients reach BP goal < 140/90

Diabetic patients with BP <130/80 mmHg at Week 16 were 45.9% and 40.7% for 5/160 mg and 10/160 mg doses, respectively

## Incremental Antihypertensive Efficacy of DIVOLTAN in Patients Previously Uncontrolled on Monotherapy

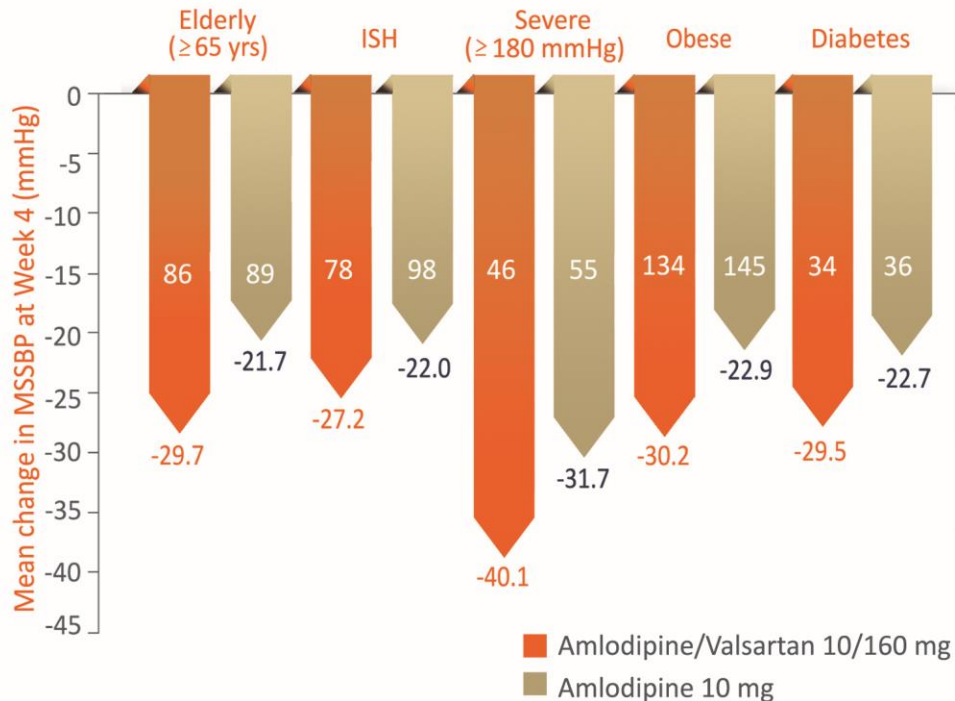

# DIVOLTAN

Amlodipine + Valsartan

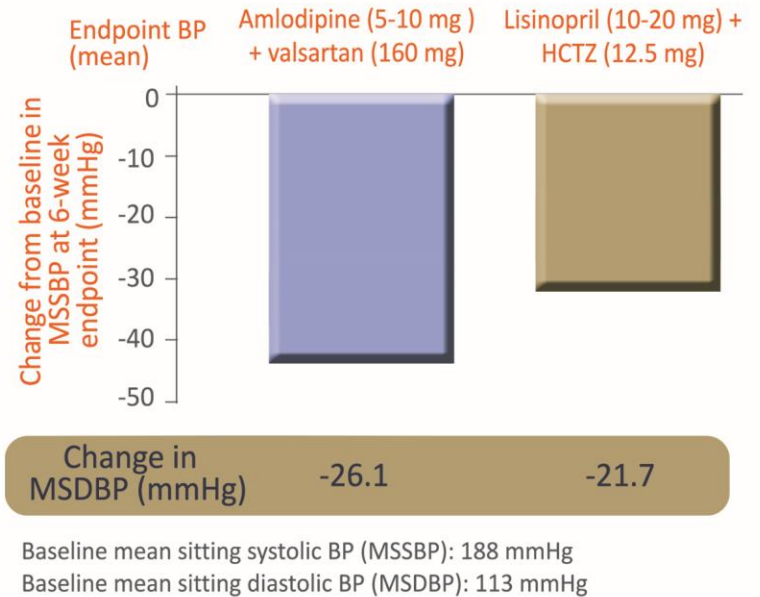

**DIVOLTAN** is approved as a **FIRST-LINE** therapy for patients likely to need more than 1 agent to achieve BP goal

## DIVOLTAN: Superior BP-lowering Efficacy versus Amlodipine Monotherapy Across Difficult-to-treat Patient Populations

## DIVOLTAN: Powerful SBP of 43 mmHg in Patients with a Baseline MSSBP ≥ 180 mmHg

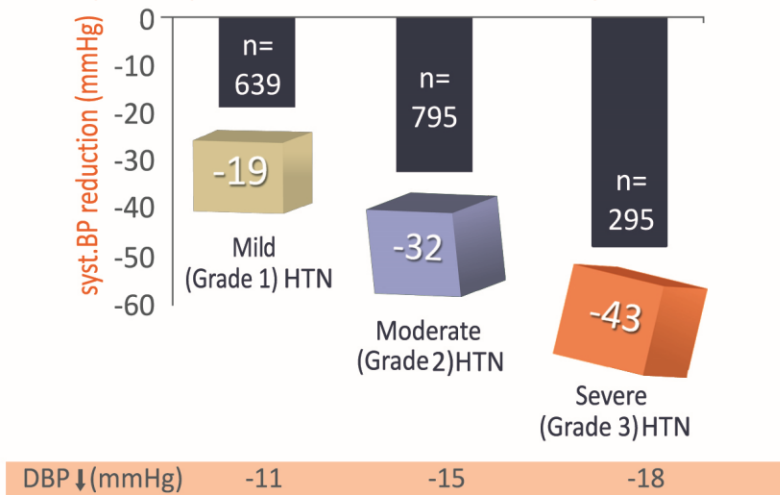

## DIVOLTAN for Diabetic Patients

- ➔ Powerful BP Reductions Across All Grades of Hypertension in Diabetic Patients.
- ➔ Increases Insulin Sensitivity to a Greater Extent than Component Monotherapies in Obese Patients with Hypertension.

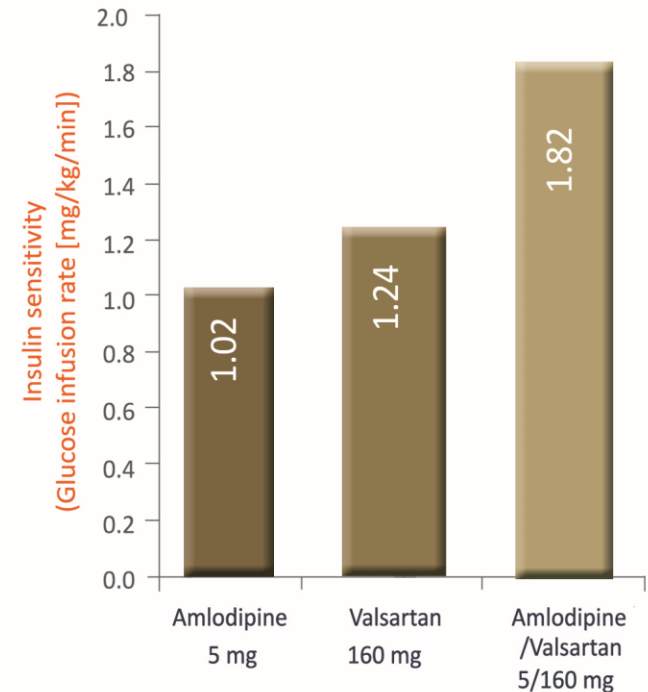

### DIVOLTAN BP Reductions in Patients with Diabetes

Prospective, open-label observational multicenter study, n=1729, 16 weeks

### DIVOLTAN Increases Insulin Sensitivity

## 8 DIVOLTAN FDA Approved Indications

### Add-on Therapy:

- A patient whose blood pressure is not adequately controlled with a CCB alone or with an ARB alone may be switched to combination therapy with DIVOLTAN.
- A patient who experiences dose-limiting adverse reactions on either component alone may be switched to DIVOLTAN containing a lower dose of that component in combination with the other to achieve similar blood pressure reductions.

### Replacement Therapy:

- For convenience, patients receiving amlodipine and valsartan from separate tablets may instead wish to receive tablets of DIVOLTAN containing the same component doses.

### Initial Therapy:

- For patients likely to need more than 1 agent to achieve BP goal.

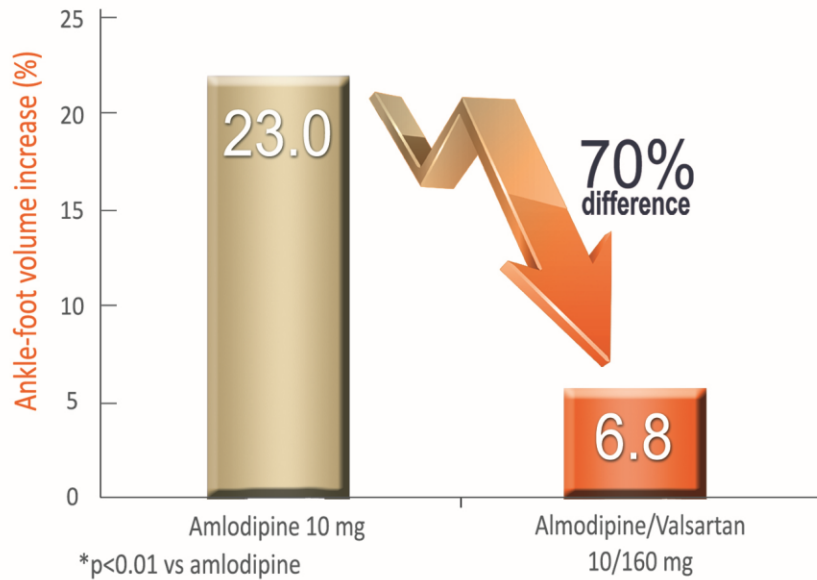

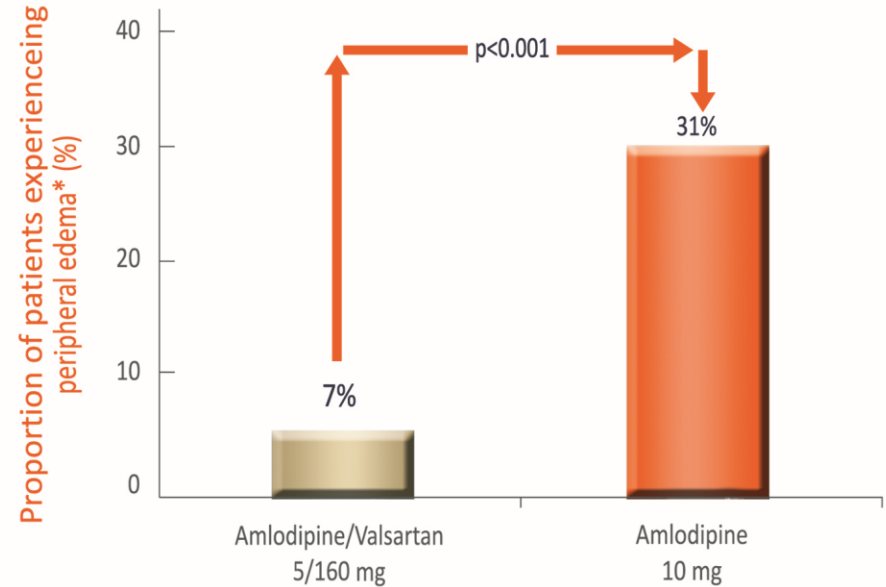

## DIVOLTAN (Amlodipine/Valsartan):

- ➔ Reduces Fluid Retention
- ➔ Lower Incidence of Peripheral Edema

### Reduced Fluid Retention with DIVOLTAN Compared with Amlodipine Monotherapy

### DIVOLTAN: Fewer Patients Experience Peripheral Edema Versus Amlodipine Monotherapy

\*Peripheral edema measured at Week 8

Schrader J. et al. Int J Clin Pract 2009;63:217-25

## 8 DIVOLTAN Safety & Tolerability

- DIVOLTAN may be administered with other antihypertensive agents.
- DIVOLTAN may be administered with or without food.
- In clinical trials, discontinuation due to side effects was comparable between

DIVOLTAN **1.8%** VS Placebo **2.1%**

Symptomatic Hypotension Occurs at Very Low Frequency with Amlodipine/Valsartan

**0.3%**

or fewer reports of symptomatic hypotension in elderly patients

**0.4%**

or fewer reports of symptomatic hypotension in non-elderly patients

DIVOLTAN Reduces Urinary Albumin Excretion Compared with Amlodipine in Patients with Stage 2 Hypertension.
